

Defence outline

Slides 1-46. Three blocks, from overview to detail. Planned duration: 26 minutes, plus 1 minute of reserve.

QA index

Find topics by slide number. Hidden slides 47-77 contain 31 QA pages, starting with coordinate transforms and handedness.

Topic	Slides	Key points
Coordinate transforms	47	Rotation and origin; inverse transforms; chained transforms
Left- and right-handed body models	48	8 input points; 5 output rotations; comparison of the two workflows
ArUco and AprilTag	49-50	Published comparisons; corner error; detection time
Data transfer and frame packets	51-52	Shared memory, TCP and UDP; measurement scope
Filtering methods	53-57	Savitzky-Golay, median, Butterworth and One Euro
Body kinematics	58-65	Camera and chain frames; root; shoulder swing and twist; elbow frame
Object pose	66	Camera to World; pose composition; sample acceptance
Occlusion recovery	67-70	Grasp offset; direction memory; wrist targets; sphere-intersection circle
Unity mapping and scene calibration	71-74	Axis conversion; rig and rest axes; gravity and floor
Evaluation metrics	75-76	Length error; scatter around a line; joint positions and reference data
Real-time pipeline logs	77	Frame number; processing time and rate; dropped frames; merger ticks

References: slides 42-44. QA pages are outside the main presentation time.
